Statutory Issue Paper No. 17

Preoperating and Research and Development Costs

STATUS
Finalized March 16, 1998

Original SSAP and Current Authoritative Guidance: SSAP No. 17

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper addresses organizational costs, research and development costs and start-up costs for new and existing entities. Current statutory accounting guidance does not specifically address the treatment of such costs. Standard statutory practice is to expense these costs as incurred. GAAP specifically addresses the treatment of research and development costs and costs of development stage enterprises. GAAP provides limited guidance on the treatment of other organizational costs resulting in varied practices.

2. The purpose of this issue paper is to establish specific statutory accounting principles related to preoperating and research and development costs that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts).

SUMMARY CONCLUSION

3. Preoperating, including organization and start up costs, and research and development costs shall be expensed as incurred. Preoperating and research and development costs are incurred for such new projects as: (1) arranging operations for a new company (e.g., legal, actuarial and accounting costs associated with regulatory approval and licensing and issuance of stock); (2) establishing production, sales or service facilities at a new site; (3) changing operations or production significantly; or (4) developing and producing a new product, adopting a new process or offering a new service. Preoperating, including organization and start up costs, and research and development costs specifically exclude tangible assets acquired in connection with such activities.

DISCUSSION

4. This issue paper adopts FASB Statement No. 2, Accounting for Research and Development Costs (FAS 2) and the related FASB Interpretation No. 6, Applicability of FASB Statement No. 2 To Computer Software (FIN 6) and rejects FASB Statement No. 7, Accounting and Reporting by Development Stage Enterprises (FAS 7). This issue paper also adopts FASB Statement No. 86, Accounting for the Costs of Computer Software to be Sold, Leased or Otherwise Marketed (FAS ’86), with the exception of paragraphs 5 and 6 and paragraphs 8 through 11, which are rejected.

5. Issue Paper No. 4—Definition of Assets and Nonadmitted Assets (Issue Paper No. 4) defines an asset as “probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.” Although in some instances preoperating and research and development costs may appear to comply with the definition of an asset established by Issue Paper No. 4, it is not consistent with the Conservatism concept included in the Statement of Concepts to estimate that it is “probable” that an entity in a preoperating phase or a new product still being developed will generate future economic benefits. Preoperating and research and development costs, therefore, do not meet the definition of an asset for statutory accounting purposes and as such should be expensed as incurred. This
is consistent with the Recognition concept included in the Statement of Concepts, which states that a reporting entity’s “ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due.”

6. FAS 2 requires research and development costs (e.g., costs related to the development of an insurance product providing a new form of coverage or modifications to an existing insurance product) to be expensed as incurred. FAS 7 specifies that the accounting of the cost of a development stage enterprise should be no different than the accounting for similar costs of a mature enterprise. FAS 7 requires that the recoverability of costs incurred by a development stage enterprise be assessed in order to identify which costs qualify for capitalization or deferral. It permits recognition of these costs as an asset if they meet the GAAP criteria for capitalization. Other organizational costs are not specifically addressed in GAAP literature resulting in varied practices. Companies which have capitalized these costs do so under the matching concept of relating costs to revenue. Under this theory, revenue will be realized through future operations and therefore the costs should be deferred and expensed in the future when the revenue is recognized. Because the future benefit is rarely certain or measurable and the future period over which deferred costs might be allocated is usually arbitrary, deferral is not consistent with the Conservatism and Recognition concepts included in the Statement of Concepts.

7. FAS 86 reaffirms the provisions of FAS 2 for the treatment of software developed to be sold, leased or otherwise marketed by requiring the related software development costs to be expensed as incurred, with the exception of software costs incurred subsequent to the research and development phase but prior to making the software available to the public. Paragraphs 5, 6 and 8 through 11 of FAS 86 allow these costs to be capitalized. For the purposes of this paper, these costs are not considered to be different from the other costs incurred during a preoperating or research and development period and are included in the conclusion to expense these costs as incurred.

Drafting Notes/Comments
- Accounting treatment of goodwill, real estate, EDP equipment and software and furniture and equipment are addressed in separate issue papers.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting
8. The majority of states do not specifically address the admission of preoperating costs in their insurance regulations and statutes. Typically, a reference is made to the treatment of goodwill and all other intangible assets. An example of this type of state guidance is New York Statutes - Insurance Laws, Chapter 28 of the Consolidated Insurance Laws, Article 13, *Assets and Deposits*, which states:

   The following shall not be allowed as admitted assets of a domestic or foreign insurer or the United States branch of an alien insurer in any determination of its financial condition:

   (1) Goodwill, trade names, agency plants and other like intangible assets.

9. Several states do make specific reference to organization costs in their insurance regulations and statutes. For example, Maryland Insurance Statutes - Insurance Laws, Article 48A -- Insurance Code, Subtitle 5, *Assets and Liabilities*, explicitly requires the nonadmission of organization costs, as opposed to expensing them as incurred.

Generally Accepted Accounting Principles
10. FAS 2, paragraph 12, states that “All research and development costs encompassed by this Statement shall be charged to expense when incurred.”
11. FAS 2 contains the following definitions:

8. For purposes of this Statement, research and development is defined as follows:

   a) Research is planned search or critical investigation aimed at discovery of new knowledge with the hope that such knowledge will be useful in developing a new product or service (hereinafter “product”) or a new process or technique (hereinafter “process”) or in bringing about a significant improvement to an existing product or process.

   b) Development is the translation of research findings or other knowledge into a plan or design for a new product or process or for a significant improvement to an existing product or process whether intended for sale or use. It includes the conceptual formulation, design, and testing of product alternatives, construction of prototypes, and operation of pilot plants. It does not include routine or periodic alterations to existing products, production lines, manufacturing processes, and other on-going operations even though those alterations may represent improvements and it does not include market research or market testing activities.

12. FIN 6, paragraph 5, states:

   When software for use in research and development activities is purchased or leased, its cost shall be accounted for as specified by paragraphs 11(c) and 12 of Statement No. 2. That is, the cost shall be charged to expense as incurred unless the software has alternative future uses (in research and development or otherwise).

13. FAS 86 amends FAS 2 and FIN 6 to provide guidance on accounting for software developed internally for sale, lease or other marketing. FAS 86, paragraph 3, states:

   All costs incurred to establish the technological feasibility of a computer software product to be sold, leased, or otherwise marketed are research and development costs. These costs shall be charged to expense when incurred as required by FASB Statement No. 2, Accounting for Research and Development Costs.

14. FAS 86, paragraphs 5 and 6, addresses the treatment of the costs of internally developed software that has completed the research and development phase but has not been made available to the public. FAS 86, paragraph 5, states:

   Costs of producing product masters incurred subsequent to establishing technological feasibility shall be capitalized. Those costs include coding and testing performed subsequent to establishing technological feasibility. Software production costs for computer software that is to be used as an integral part of a product or process shall not be capitalized until both (a) technological feasibility of the product has been established for the software and (b) all research and development activities for the other components of the product or process have been completed.

15. FAS 86, paragraph 6, states:

   Capitalization of computer software costs shall cease when the product is available for general release to customers. Costs of maintenance and customer support shall be charged to expense when related revenue is recognized or when those costs are incurred, whichever occurs first.

16. Paragraphs 8 through 11 of FAS 86 address the accounting and disclosure requirements for software costs capitalized under the provisions of paragraph 5 above.
17. FAS 7 states:

Generally accepted accounting principles that apply to established operating enterprises shall govern the recognition of revenue by a development stage enterprise and shall determine whether a cost incurred by a development stage enterprise is to be charged to expense when incurred or is to be capitalized or deferred. Accordingly, capitalization or deferral of costs shall be subject to the same assessment of recoverability that would be applicable in an established operating enterprise.
